ACADEMIC PROJECTS

ClassPaths: Weakly supervised class-specific subnets for faster-inference Dec 2017 – Dec 2018
Advisors: Prof. Kris Kitani, Dr. Ambrish Tyagi, Dr. Varsha Hedau CMU

- Exploited class-wise parameter redundancy and activation map sparsity for finding class-specific subnets (ClassPaths) for faster inference
- Proposed an auxiliary supervisor network trained on a multi-loss formulation to jointly optimize accuracy, sparsity, pair-wise selectivity and quantization on the learned class-specific subnets
- Deep-networks employing ClassPaths achieved similar performance as a full capacity network, with 40%-60% FLOPS reduction during inference

Deep Spectral-based Shape Features for Alzheimer's Disease Classification Feb 2016 – Jul 2016
Undergraduate Thesis, Advisor: Dr. Samuel Kadoury Univ. of Montreal

- Developed an unsupervised framework for classification of Alzheimer's disease patients using noisy T1-weighted MRI brain images
- Proposed a combination of grey-matter voxel-based intensity variations and 3D structural (shape) features parameterized with a spherical-harmonics representation
- Results presented near state-of-the-art accuracies (>89%) – outperformed conventional MRI shape-based strategies by 22%-27%

C2F: Coarse-to-Fine Vision Control System for Automated Microassembly May 2014 – Dec 2014
Advisor: Dr. H D Sharma Central Electronics Engineering Research Institute, Pilani

- Developed a completely automated, visual-servoing based closed loop system to perform 3D micromanipulation and microassembly tasks
- Solved challenges around object recognition/tracking, scene understanding, path planning and obstacle avoidance
- Results led to a ~75% reduction in setup and run time as compared to manual operation, while mitigating any risk of collision during grasp-and-drop experiments

Learning Scene Saliency Maps Using Superpixel-augmented Convolutional Neural Networks Aug 2017 – Dec 2017

- Extracted SLIC superpixel segmentations in input images and defined a range and color separation vector as input to a Siamese Convolutional Neural Network (CNN)
- Trained the network on the ECSSD saliency dataset. Superpixels allow for significant speedup (4x) in training while capturing a larger spatial context, leading to more precise saliency maps

Towards Integrating Model Dynamics for Sample Efficient Reinforcement Learning Jan 2017 – May 2017

- Developed a principled approach for solving sample inefficiency issues while deploying model-free reinforcement learning in real environments
- Learned a dynamics model of the world by assuming domain-specific priors on real-world episodes. Used the learned dynamics model to augment real-world episodes as the training progressed
- Established that augmenting real-world data using an approximate world-model tends to be significantly more sample efficient than naïve model-free reinforcement learning
